

B. A Economics			
	CBCS (Honours)		
Semester I			
Course Name	Course Outcome		
ECNHC101: Introductory	This course helps the students to gather knowledge on the		
Microeconomics	basic principles of microeconomics. It also provides students		
	the foundation of thinking as an economist. The course		
	content is the basis of understanding the real-life situations.		
ECNHC102:	This course enables the students how to use mathematical		
Mathematical Methods for	techniques to analyse economic problems. Paper like		
Economists-I	microeconomic theory, econometrics, and statistics can be		
	studied by using mathematical techniques as described in this course.		
ECNGE1: Introductory	This course helps the students to gather knowledge on the		
Microeconomics	basic principles of microeconomics. It also provides students		
	the foundation of thinking as an economist. The course		
	content is the basis of understanding the real-life situations.		
	Semester II		
ECNHC201: Introductory	This course helps students to learn the basic concepts of		
Macroeconomics	macroeconomics pertaining to the determination and		
	measurement of aggregate macro variables such as savings,		
	investment, money, GDP, inflation, and the balance of payments.		
ECNHC202:	The study of the course helps students to use mathematical		
Mathematical Methods for	techniques in some microeconomics theories, statistics and		
Economists-II	econometrics. Use of mathematical techniques to study		
	economic theory helps students to analyse economic		
	problems in lucid and precise manner.		
ECNGE2: Introductory	This course helps students to learn the basic concepts of		
Macroeconomics	macroeconomics pertaining to the determination and		
	measurement of aggregate macro variables such as savings,		
	investment, money, GDP, inflation, and the balance of		
	payments.		
	Semester III		
ECNHC301: Essentials of	Studying this course, the students will be ableto formally		
Microeconomics	analyse the behaviour of individual economic agents.		
	Students can also use the quantitative techniques to		
	understand the basic concepts of microeconomics.		
	•		
ECNHC302: Essentials of	This course makes students familiar to formal model building		
Macroeconomics	of macroeconomic theory using analytical tools. Student can		
	also learn various alternative theories of output and		
	employment determination in closed economy both in the		

	short as well as medium run and role of policy effectiveness	
	in this context.	
ECNHC303; Statistical	After going through this course, the students will be able to	
method for economics	gather knowledge on basic concepts and terminology using	
	statistical analysis and inference. Study about probability along with discrete and continuous random variable, sampling techniques, sampling distribution etc., are also introduced in this course.	
ECNGE3.1: Indian	This course helps students to review and analyse major trends	
Economy-I	in economic indicators in India, particularly during post-	
	independence era.	
ECNGE3.2: Money and financial markets	Studying this course, students can grasp knowledge on the different theories of money and financial markets. It also deals in the functioning of monetary and financial instruments as well as sectors of the economy.	
ECMICA01 A 1	Semester IV	
ECNHC401: Advanced	The course aims at providing conceptual clarity to students	
Microeconomics	coupled with the use of mathematical tools and reasoning. It provides a fillip to understand about general equilibrium and welfare, imperfect market etc.	
ECNHC402: Advanced	Introducing the long run dynamic issues like development,	
Macroeconomics	growth and technical progress are the basic objectives of this course. This course also enlarges students' knowledgebase on the micro-foundation to the various economic aggregates.	
ECNHC403: Introductory	It comprehensible introduces students to basic econometric	
Econometrics	concepts and techniques. A few statistical concepts like hypothesis, formulation and testing, estimation and diagnostics checking of single and multiple regression model etc., also the input of this course.	
ECNGE4.1: Indian	Going through this course, the students can examine sector	
economy-II	specific policies and their impacts on the key economic indicator in India. This course also introduces students with the current economic issues in India.	
ECNGE 4.3: Public	Students can acquaint with the knowledge on Govt. finances	
Finance	with reference to India associated with the financial issues in India in its practical aspects.	
1		
	Semester V	

ECNHC502:	To equip the students with knowledge of HDI in connection
Development-I	with poverty and inequalities in India along with respective theories and conceptual issues.
	theories and conceptual issues.
ECNHC501: Indian	Through this course, students can acquire knowledge on the
Economy - I	major trends in economic indicators in India in the post-
	independence periods. Emphasis is given on the particular
	importance on breaks in the trends because of policy changes.
ECNHDSE505: Money	It helps students to understand the theory and working of
and Financial Markets	monetary and financial sector of an economy. Different
	constituents of financial markets and institutions are also
	focused in this course. This course also highlighted the
	instrument of monetary control and monetary management. Reforms in the financial and monetary market along with
	changes in monetary policy in the post globalization period in
	India are also discussed at length in this course.
ECNHDSE506:Public	Studying this course students can get knowledge on
Economics	government policies on terms of economic efficiency and
	equity. Govt. intervention through public policies and its impact on allocation, distribution of public resources along
	with stabilization in the economic system are also focused in
	this course. The course simply analyses the govt. taxation and
	expenditure policies. Student can also acquire knowledge on
	public goods, market failures and externalities from this
	course.
	Semester VI
ECNHC601: Indian	The course acquaints students with the tools of sector specific
Economy- II	policies along with impact and incidents in formulating the
	trends in major economic indicators in India. Key emerging
	issues such as budgetary management, monetary policy changes by RBI etc., are also emphasized in this course
	content.
ECNHC602: Development	Through this course students get room for understanding
Economics-II	some development issues such as population growth viz-a-viz
	development, the meaning of demographic concepts and
	trends in their indices. The structure and contracts of the market is also linked to the concerns of implementation of the
	policy inflicting in the underdeveloped countries. It helps
	11 / 6

ECNHDSE602: Environmental Economics	students to study about the governance of communities and organization associated with sustainable development goals. The course envisages on the role of liberation and globalization along with increased dependence for the process of development. Studying this course students find the economic causes of environment concerns besides meaning of some basic concepts. They also acquaint with the knowledge of economic institution, incentives and other instruments and
	policies which are being applied to environmental issues and measurement. It also addresses the economic implication of
	environmental policies in addition to valuation of environmental qualities, quantitative measurement of
	environmental losses, tools of environmental projects such as
	cost-benefit analysis and environmental impact assessment. A
	few global environmental problems along with activities of
	respective international forum are also focused in this course.
ECNHDSE604: The	This course enriches learners with the inherent and changing
Economy of North-East	characteristics of the economy of North-East India. It helps
India	students to know about the performance and challenges of
	different sectors of the respective economy.
